Streif UK & GmbH Design Software

The Streif design teams are conversant with the most commonly used design software packages, and our buildings are designed using a combination of 2d and 3d modelling tools across multiple platforms.

Set out below are the standard design tools we use for our projects at our UK offices and at our factory in Germany.

The Streif UK design team are conversant with Autodesk Revit Software and have worked on numerous projects where Revit has been used by the architectural team to create a 3d building model on which all parties then work.
